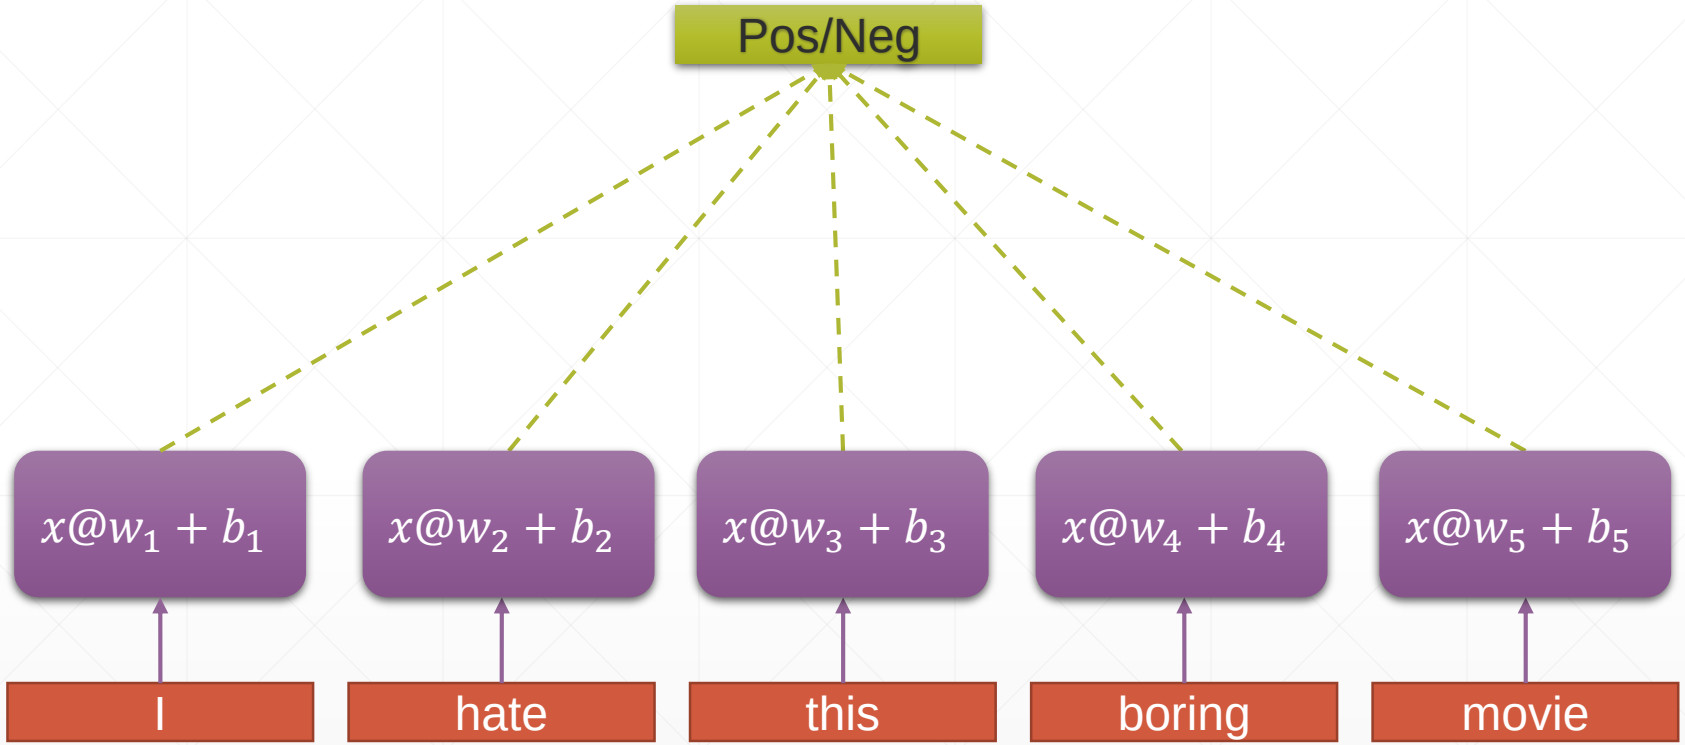
循环神经网络

主讲人：龙良曲

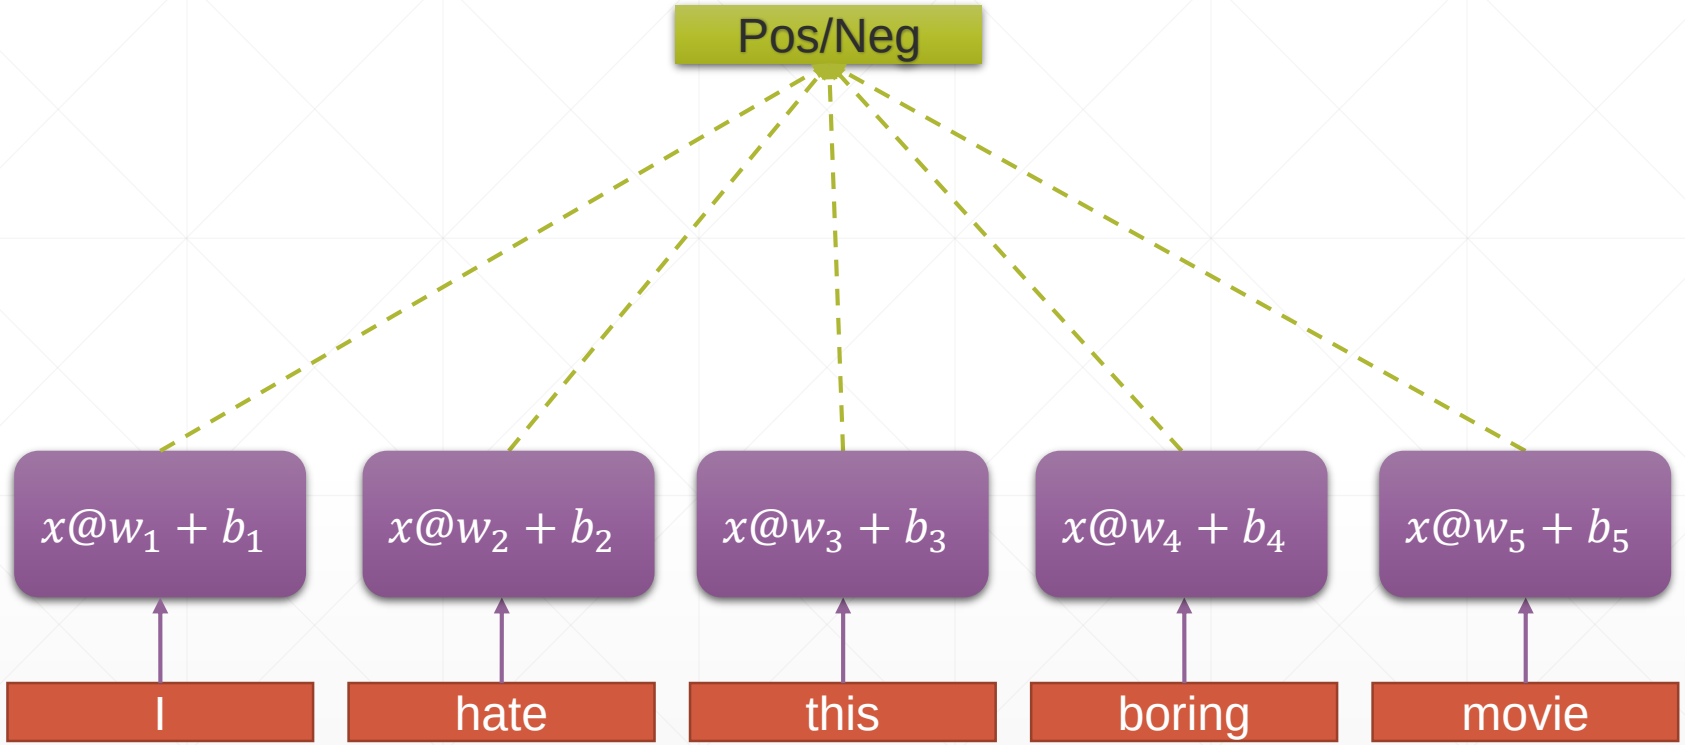
Sentiment Analysis



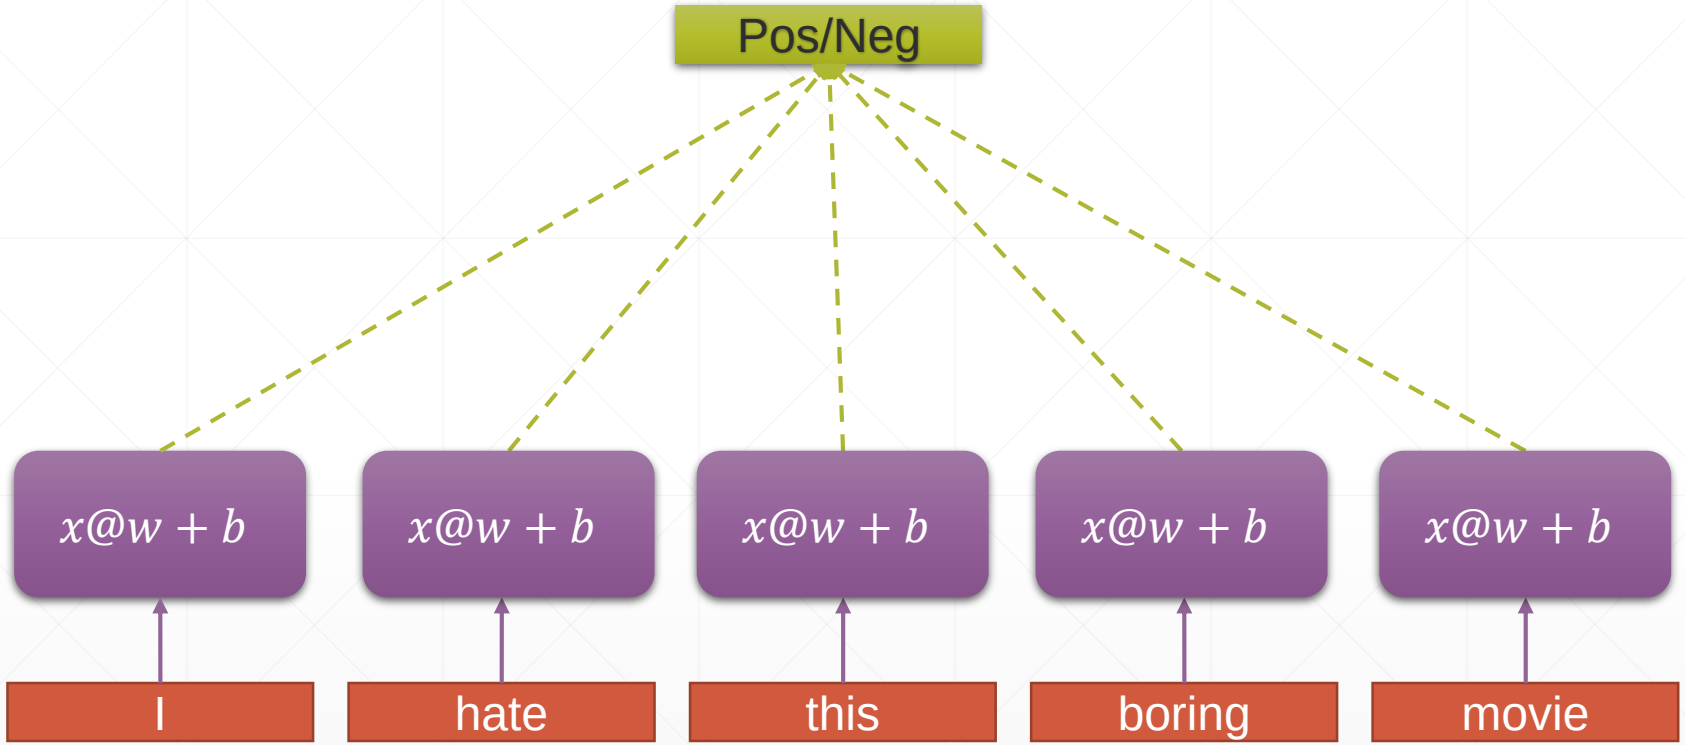
Flaws

- Long sentence
  - 100+ words
  - too much parametes [w, b]
- no context information
  - consistent tensor

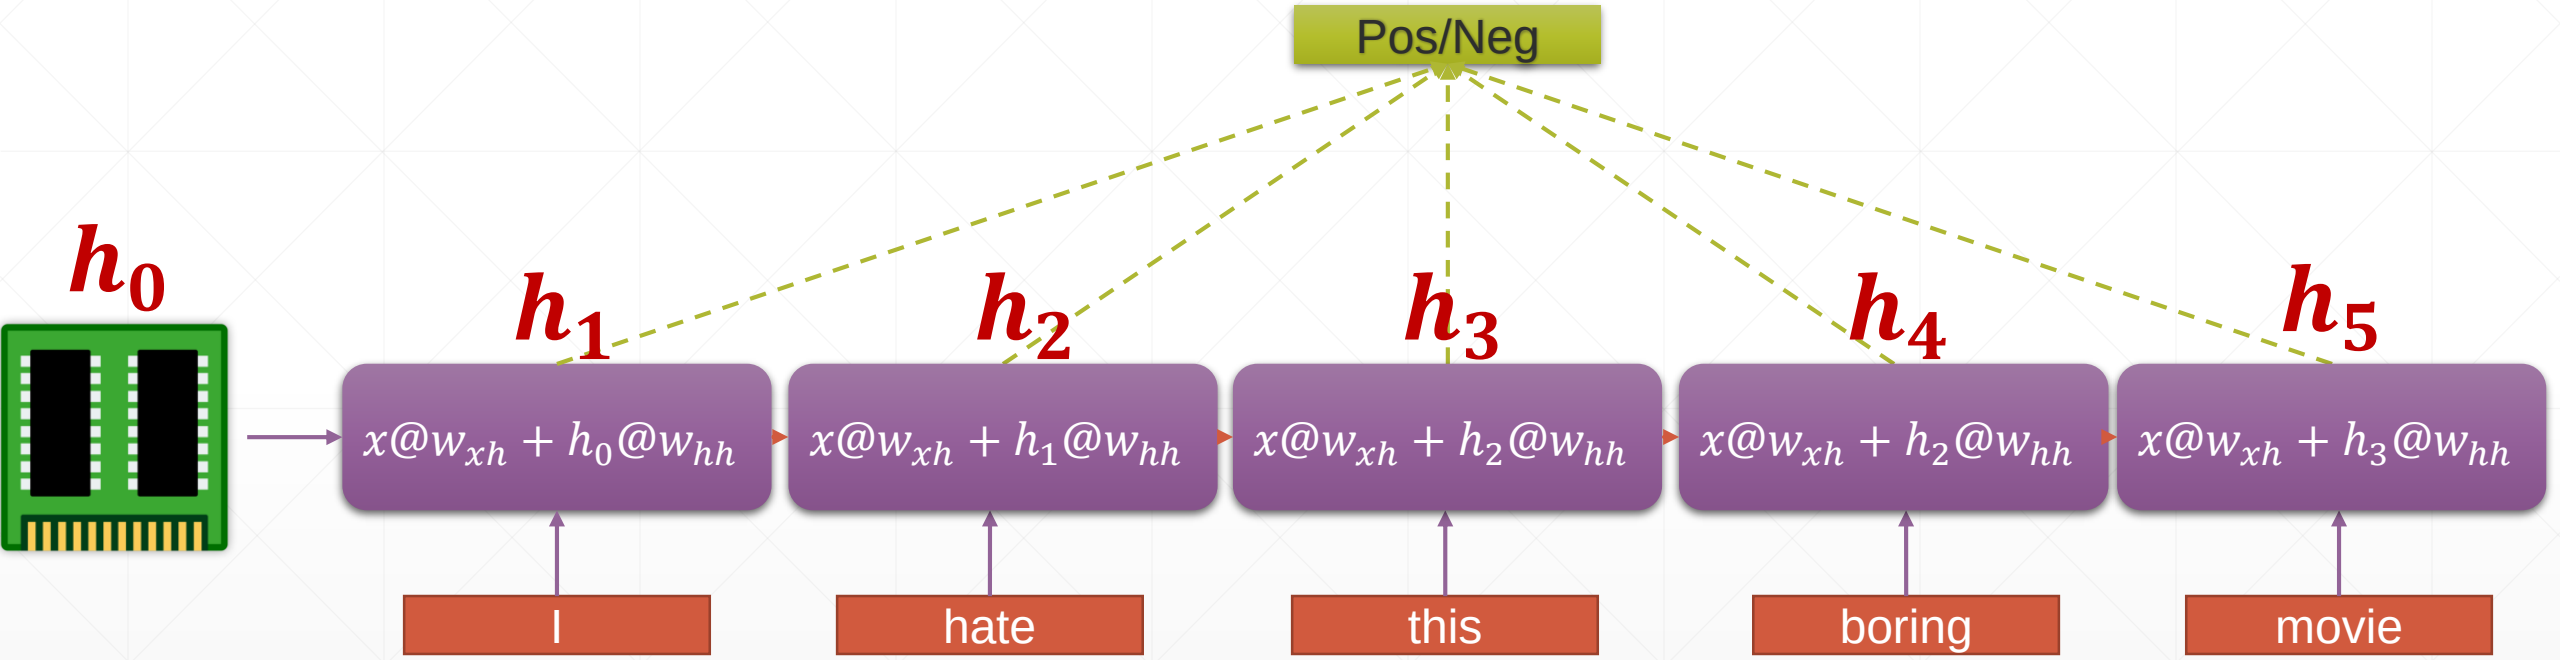
Naïve version



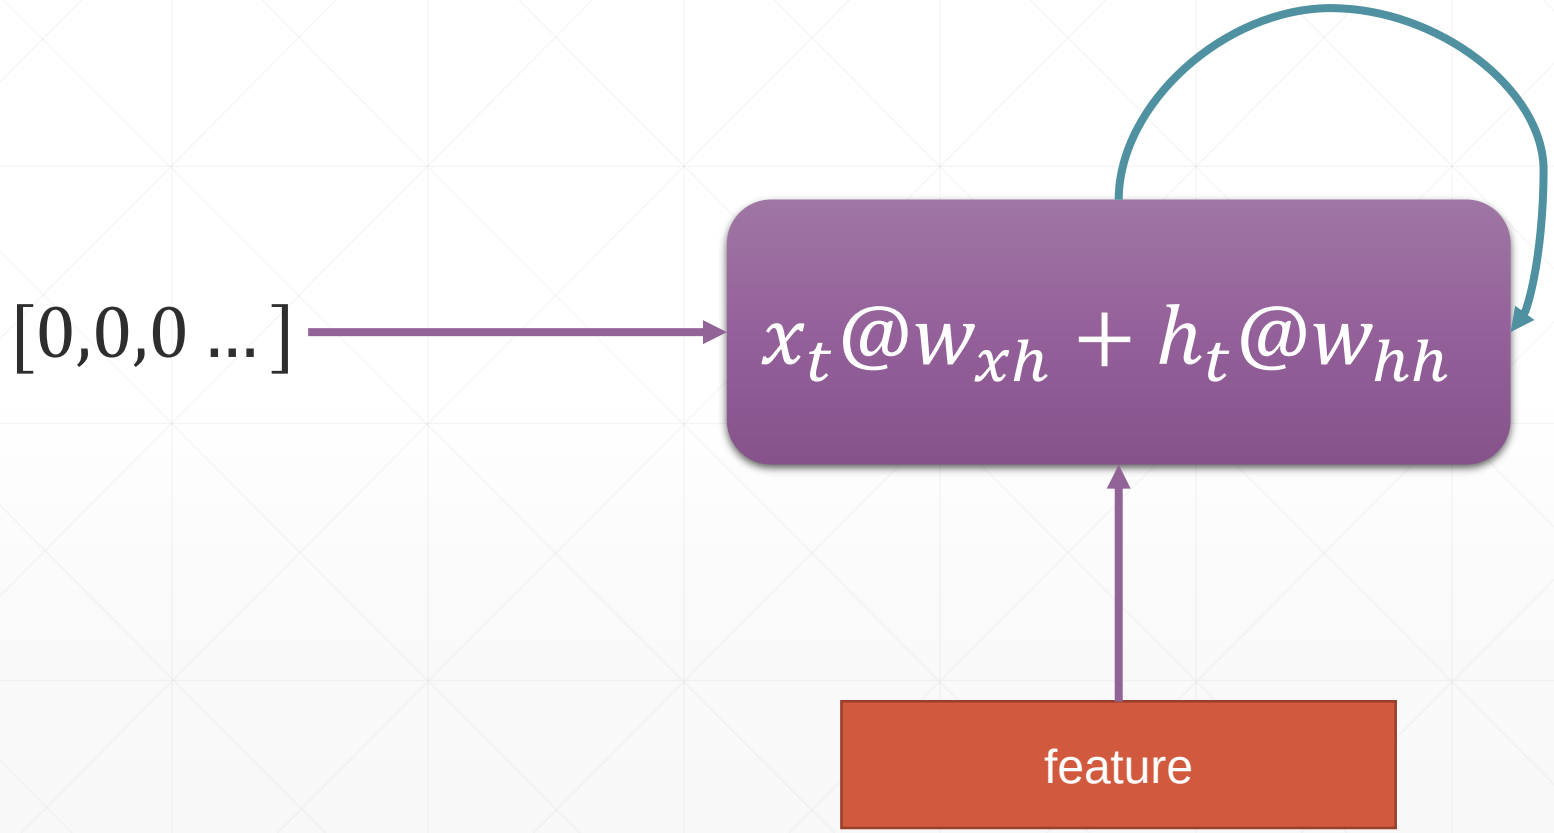
Weight sharing



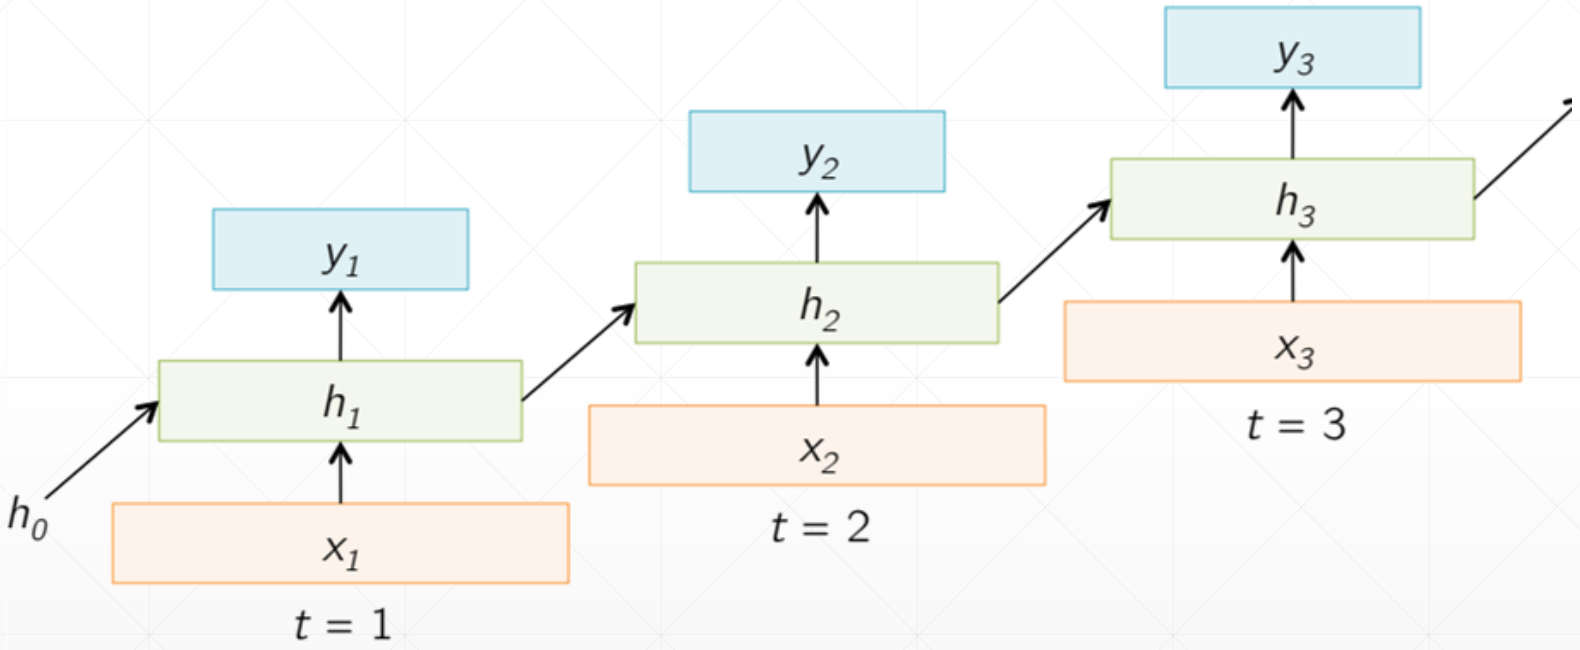
Consistent memory

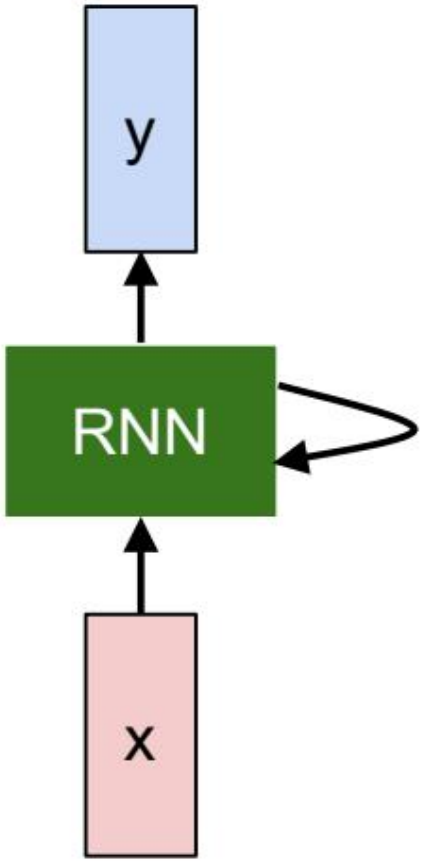


Folded model



Unfolded model





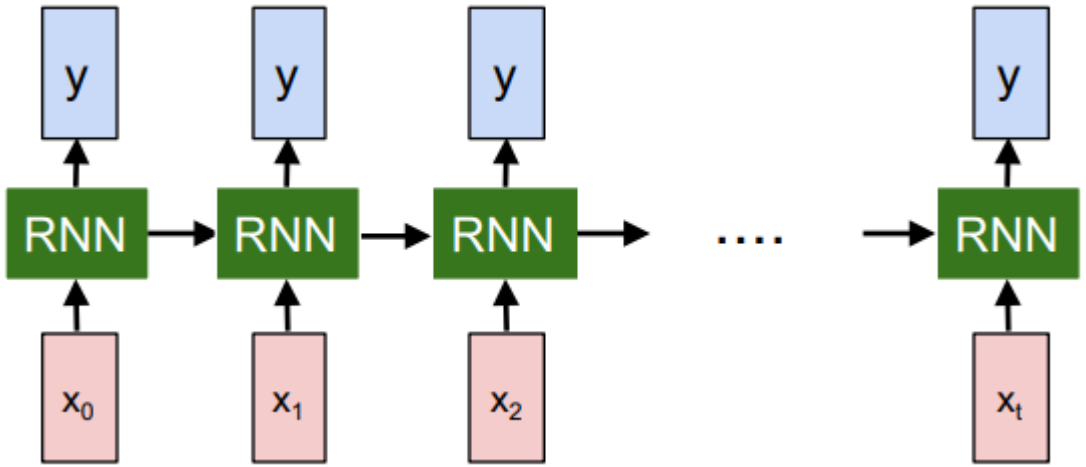
$$h_t = f_W(h_{t-1}, x_t)$$

$$\downarrow$$

$$h_t = \tanh(W_{hh}h_{t-1} + W_{xh}x_t)$$

$$y_t = W_{hy}h_t$$

How To Train?



$$h_t = tanh(W_I x_t + W_R h_{t-1})$$
$$y_t = W_O h_t$$

$$\frac{\partial E_t}{\partial W_R} = \sum_{i=0}^{t} \frac{\partial E_t}{\partial y_t} \frac{\partial y_t}{\partial h_t} \frac{\partial h_t}{\partial h_i} \frac{\partial h_i}{\partial W_R}$$

$$\frac{\partial h_t}{\partial h_i} = \frac{\partial h_t}{\partial h_{t-1}} \frac{\partial h_{t-1}}{\partial h_{t-2}} \cdots \frac{\partial h_{i+1}}{\partial h_i} = \prod_{k=i}^{t-1} \frac{\partial h_{k+1}}{\partial h_k}$$

$$f = tanh(x)$$
$$\frac{\partial h_{k+1}}{\partial h_k} = diag(f'(W_I x_i + W_R h_{i-1}))W_R$$

$$\frac{\partial h_k}{\partial h_1} = \prod_{i}^{k} diag(f'(W_I x_i + W_R h_{i-1}))W_R$$

h_0, w_{ih}, w_{hh}
